Monahan Partners Boasts 'Lightening' Rods

Monahan Partners continues to grow its fiberglass business and ranks its fiberglass handles amongst its most popular items.

Though the fiberglass handles have been a 'lightening rod' to the business, fiberglass does not conduct electricity. Plus, the 'lighten' in 'lightening' reminds folks that fiberglass is lighter than wood - and stronger. The tubes also brag a consistency in size, strength, and durability. The non-conductivity and light weight makes fiberglass the preferred handle in the foodservice industry.

Monahan Partners offers 15/16" or 1" diameter with 54" or 60" length and offer the tubes assembled with Monahan Partners wide variety of both plastic and metal mop connectors or offered with an open end. All tubes come with a black swivel cap. Yellow is the most popular color but all standard colors are available and best of all, the tubes are competitively priced.

Vice President Kevin Monahan credits the fiberglass tubes with helping diversify Monahan Partners catalogue for customers; "Fiberglass tubes have been one more way we can be more of a one stop shop for customers. It's important for our customers whose end users are in the food industry to have the safest way to clean and fiberglass handles have proven to be the answer."

Most of Monahan Partners customers opt to have their handles assembled with threads or mop hardware. Kevin added, "We really believe in our President Pat Monahan's motto, 'We're in this together'".
